

Servo drive system

II Catalogue V3.5

Intelligent. Valuable. Reliable

More efficient - excellent performance, stimulate the potential of the machine

▲ Excellent performance, rich functions, high precision, high response, high protection, etc., significantly improve mechanical production efficiency

3kHz response frequency

▲ The speed response frequency of the servo drive is 3kHz, the command response is faster, the position setting time is shorter, combined with the high-resolution absolute position encoder, it can realize high-speed and high-precision operation

23-bit absolute encoder

▲ MA3 series servo motors use 23-bit single-turn/multi-turn absolute encoders with high resolution to improve the positioning accuracy of the equipment.

23-Bit=8388608pulses/rev

Support full closed-loop control

▲ The servo drive can support full-closed-loop control, provide a variety of control methods, and realize high-precision control on the mechanical side.

EtherCAT high-speed communication

▲ Adopt ETG-certified communication chips to ensure high-speed and reliable communication;

▲ The transmission rate is as high as: 2x100Mbps (full duplex), and the bus can support 250us synchronous signal cycle, which is especially suitable for interpolation and cam track control in printing, machine tools, electronics and other industries, and improves the synchronization of multiple axes.

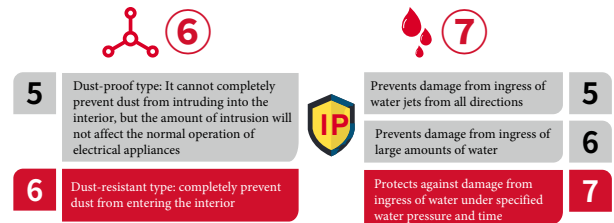

4 times peak torque/7000rpm peak speed

▲ MA3 series servo motors have up to 4 times the peak torque and 7000rpm peak speed, wider servo operating range, better dynamic performance of the servo system, and higher output rate.

IP67 degree of protection

▲ The protection level of the whole series of MA3 motors can reach IP67, which provides higher waterproof and oil resistance capabilities, expands the scope of application of the product, and improves the reliability of the equipment

Easier to use - safe and convenient

▲ Adhering to the concept of humanized design, it provides safe, easy-to-use and compatible software and hardware product functions to meet the needs of use from design to production

Increased power range to 7.5kW

▲ The power range of RA3 series servo drives has been increased to 7.5kW, enriching the product line and providing more application solutions.

Series

RA1	100W		3kW
RA3	100W		7.5kW

Smaller size

▲ The body of RA3 series servo driver is further reduced to save more space and easy to install;
 ▲ The MA3 series servo motors have an industry-leading shorter body, especially suitable for applications with limited installation space such as the robotics industry.

Reduce the size of driver Shorten the length of the motor

40%

20%

Encoder battery buckle design

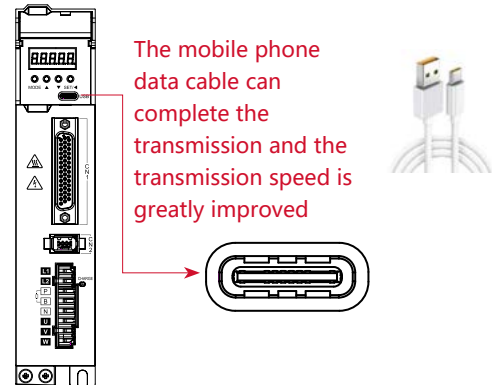

▲ Absolute encoder battery can be installed at the bottom of the drive, snap-on design, more convenient installation and replacement, improve ease of use.

TYPE-C debugging interface

▲ The debugging interface is improved to USB Type C, the speed of downloading programs and parameters is faster, and the download time is greatly reduced;

▲ Cables are easy to get and support reversible plugging.

Optional STO safety function

▲ The STO (Safe torque off) function is optional, and the safety level is raised from SIL 2 to SIL 3. It is easy to build a safety system for equipment and effectively protect personal and equipment safety.

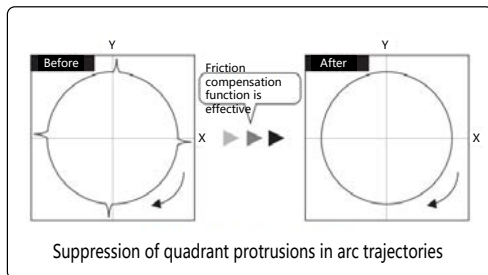

Software upgrade, more powerful

▲ One-button self-learning: one-button adjustment function, which can easily implement automatic tuning, complete automatic setting of inertia ratio, gain, resonance and other parameters, and maximize servo performance

▲ Friction compensation function: It can effectively control the phenomenon of quadrant protrusion when the rotation direction of the servo motor is reversed due to friction, improve the accuracy of the arc track, and run more smoothly.

▲ Medium and low resonance frequency suppression: In addition to low-frequency and high-frequency vibration suppression, it can also suppress low- and medium-frequency vibrations at a frequency of 1kHz, which helps to improve debugging efficiency and save time.

More energy-saving - energy saving and environmental protection

▲ Optimized electromagnetic design, advanced manufacturing process, reduced motor temperature rise, extended service life, improved energy efficiency, green and low-carbon environmental protection

more energy efficient

▲ The servo motor adopts a new electromagnetic design and leading manufacturing process, which has higher efficiency, lower power consumption and more energy saving.

Lower temperature rise

▲ The optimized electromagnetic design of the servo motor cooperates with the pole slot, the temperature rise of the motor is lower, the operation is more reliable for a long time, and the service life of the motor is longer

Various certificates

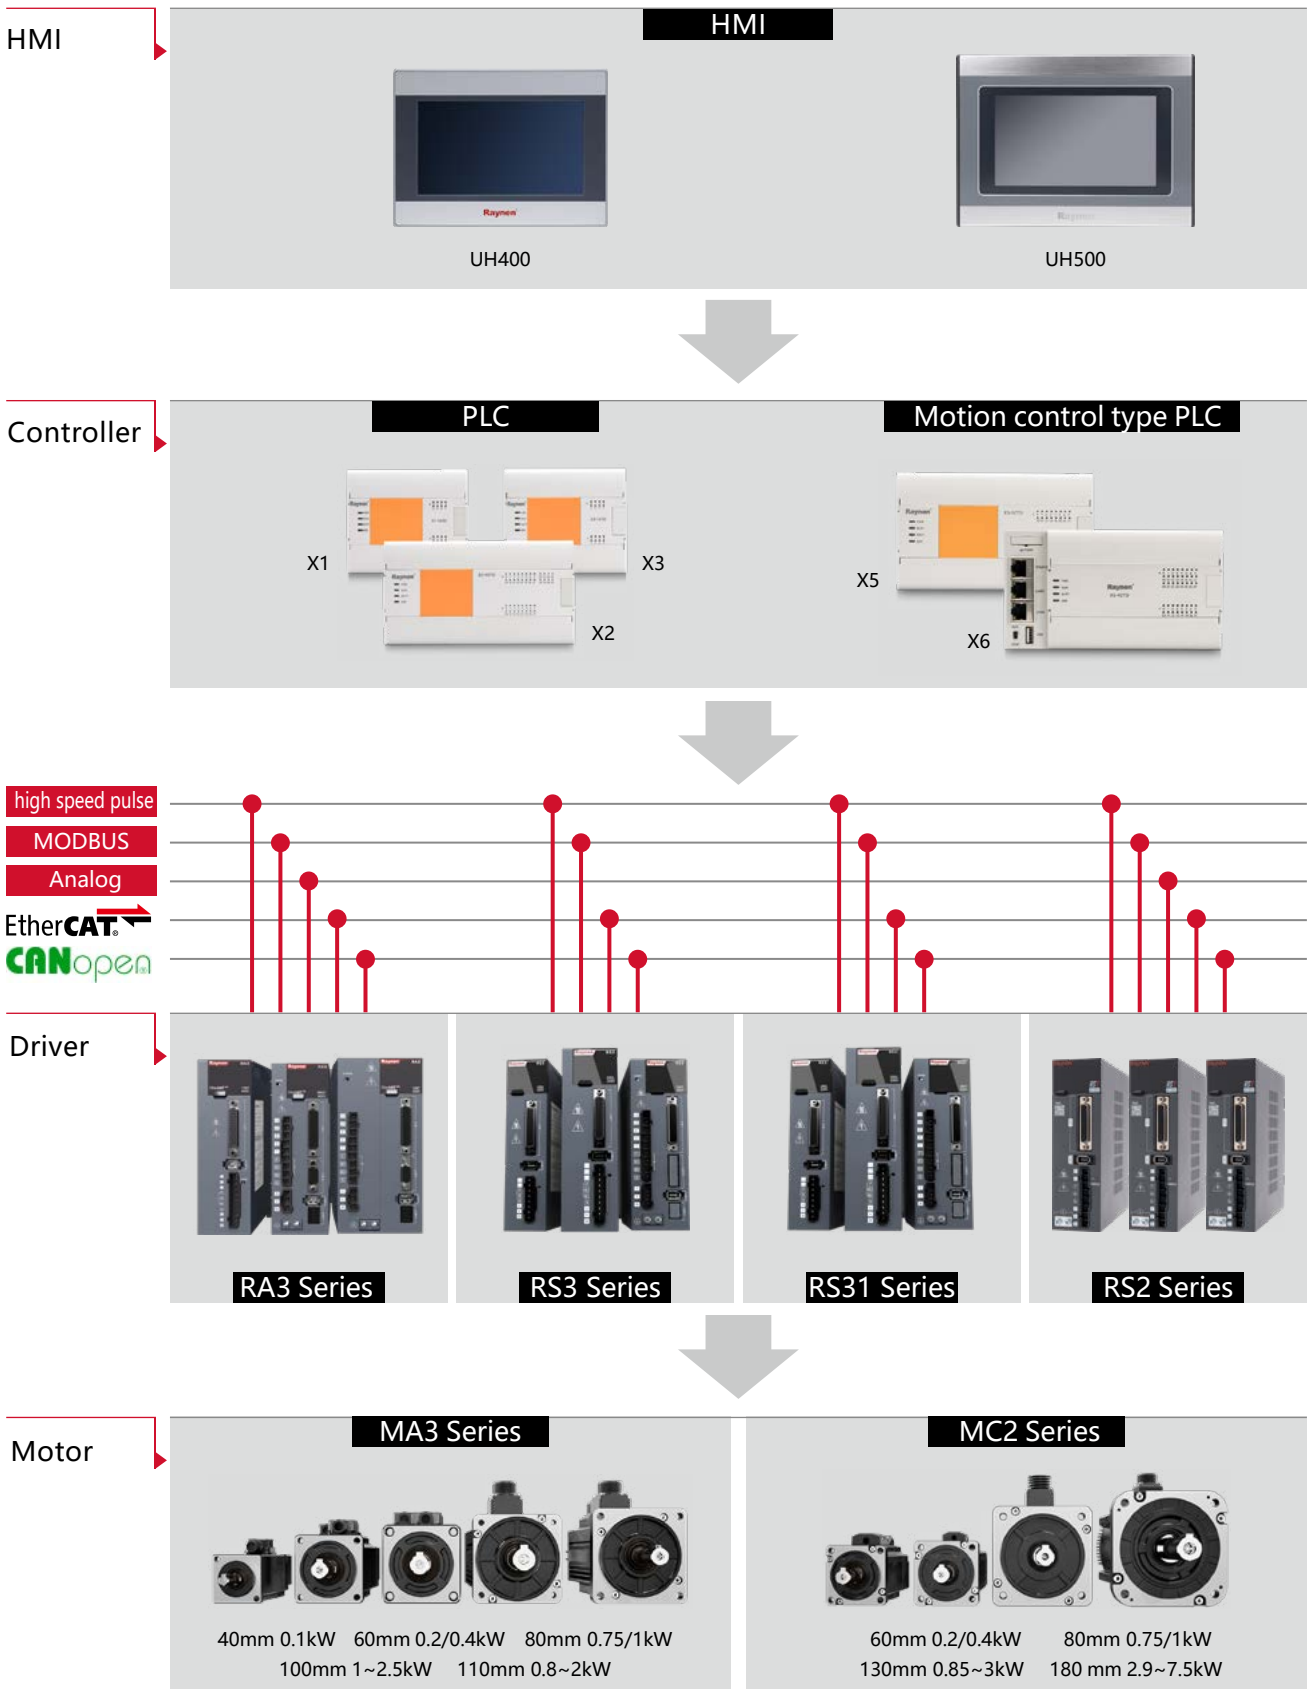

▲ The product complies with CE certification and the European Union's Restriction of the Use of Specific Hazardous Substances (RoHS) Directive, green and environmentally friendly design, meeting the needs of equipment export and sustainable development of an environmentally friendly society

1

Servo System Architecture and Industry Applications

Servo System Application Architecture

Industry application example

In order to meet the ever-changing market demand, with its excellent performance, perfect functions and small size, Rui Neng servo helps to build a system solution with high precision, high reliability and high ease of use, and further expands the scope of application.

Textile machiner

High-speed and high-precision servo system is adopted to fully guarantee the quality consistency of textiles and greatly improve production efficiency.

Logistics equipment

With the high-speed and high-precision positioning function of the servo system, the fast and precise operation of various logistics equipment such as handling machinery is realized.

Lithium battery equipment

With rich product specifications, perfect protection mechanism, and high-speed and high-precision drive capability, the servo system meets the requirements of continuous technological progress and realizes the perfect combination of battery quality and production efficiency.

Woodworking machinery

Servo system with large torque and large inertia, stable and reliable output, adapt to more types of plates, built-in perfect drive model and compensation algorithm, perfectly matching multiple brands of upper controllers.

Robot

Small size, high speed, low temperature rise servo system, adapt to the development trend of more compact robot installation space and faster beat.

Cutting equipment

The high precision of the servo system and the ability to run stably at high speeds improve the cutting accuracy and surface finish of the workpiece.

3C industry equipment

The high speed, high precision, and high dynamic response performance of the servo system fully meet the high-speed and complex process requirements of 3C industry equipment, and help 3C product manufacturers improve quality and efficiency.

Printing machine

The multi-axis servo synchronization scheme based on high-speed bus ensures high-precision synchronous action in the high-speed printing process and realizes high-quality printing.

Packaging Machinery

The servo system with high dynamic response and high-precision positioning performance can easily meet the process requirements of labeling machines, horizontal packaging machines, vertical packaging machines and other packaging machinery.

Metal forming machine

The high-precision and high-response performance of the servo system fully meets the motion control requirements such as cams, and easily realizes the processing and molding of various shapes of workpieces.

RA3 series terminal definition

Size A

NO.	Terminal	Direction
1	-	7-digit display
2	USB	USB Type-C , connect to PC
3	CN1	Connector for output/input signal, connect to PLC or I/O
4	CN2	Encoder interface, connected to the encoder on the servo motor
5	L1、 L2	Main circuit power supply, single-phase (200~240VAC, 50/60Hz)
6	brake / common DC	Use external braking resistor, common DC bus
7	U、 V、 W	Servo drive output, connected to motor (U, V, W)
8	ground screw	Connect to power ground wire and motor groundwire
9	CHARGE	Power Indicator
10	CN3	STO interface, only '-S/FS' models support this function
11	CN4/CN5	485
		EtherCAT
		CAN

Size B

NO.	Port	Direction
1	-	7-digit display
2	USB	USB Type-C , connect to PC
3	CN1	Connector for output/input signal, connect to PLC or I/O
4	CN2	Encoder interface, connected to the encoder on the servo motor
5	L1、 L2、 L3	Main circuit power supply, single-phase power supply (200~240VAC, 50/60Hz) connected between L1 and L2
6	brake / Common DC	Use external braking resistor (remove the P and B1 short-circuit, connect it to P and B2), internal braking resistor, common DC bus
7	U、 V、 W	Servo drive output, connected to motor (U, V, W)
8	Ground screw	Connect to power ground wire and motor groundwire
9	CHARGE	Power Indicator
10	CN3	STO interface, only '-S/FS' models support this function
11	CN4/CN5	485
		EtherCAT
		CAN

Size C

NO.	Port	Direction
1	-	7-digit display
2	USB	USB Type-C , connect to PC
3	CN1	Connector for output/input signal, connect to PLC or I/O
4	CN6	Full closed loop interface, connect to external second encoder, '-FS' model supports this function
5	CN2	Encoder interface, connected to the encoder on the servo motor
6	CN3	STO interface, only '-S/FS' models support this function
7	Ground screw	Connect to power ground wire and motor ground wire
8	CHARGE	Power Indicator
9	L1C、 L2C	Control circuit power supply, connect to the 1PH power supply (200~240VAC or 380~440VAC, 50/60Hz according to the model)
10	R、 S、 T	Main circuit power supply, connected to 3PH power supply (200~240VAC or 380~440VAC, 50/60Hz according to model)
11	Brake / Common DC	Use external braking resistor (remove the P and B1 short-circuit, connect it to P and B2), internal braking resistor, common DC bus
12	U、 V、 W	Servo drive output, connected to motor (U, V, W)
13	CN4/CN5	485

RA3P/C/A Basic Specifications

Item		Specification	
Basic Specifications	Control method	IGBT PWM control, Sine wave current drive method	
	Encoder type	Communication encoder (RS485)	
	Communication	USB	Type-C , used for PC host computer communication
		RS485	Modbus, used for host controller control communication
		CAN	CAN , used for host controller control communication
	dynamic braking	Main circuit power off, servo alarm, servo off, action when overtravel	
	Protective function	Overvoltage, undervoltage, phase loss, overcurrent, overload, overspeed, encoder disconnection, etc.	
	Accessibility	Gain adjustment, notch filter, alarm record query, JOG operation, motor initial angle identification, etc.	
	Number of control signals		DI *5, HDI *2, DO *5 (pulse)
			DI*4, HDI *2, DO*4 (CANopen)
		DI*2, HDI*2, DO*3 (Size A/B Analog)	
		DI *5, HDI*2, DO*5 (Size C/D/E Analog)	
Position control	DI input function	Zero fixed enable, position command prohibited, forward overtravel switch, reverse overtravel switch, electronic gear ratio selection, position command direction setting, multi-stage position command enable, interrupt fixed-length state release, origin switch, origin reset Enable, disable fixed-length interruption, clear position deviation, and disable pulse command	
	DO output function	The positioning is completed, the positioning is close, the interruption and fixed length are completed, and the origin return is completed	
	Pulse input	Input pulse shape	Differential input, open collector
		Input pulse mode	Direction + pulse, CW+CCW, two pulses with 90 degree phase difference
		Max. pulse frequency	Differential input: high-speed maximum 4Mpps, pulse width not less than 0.125us Open collector: maximum 200kpps, pulse width not less than 2.5us
		Command filter	Average filtering, first-order low-pass filtering
	Frequency division output Frequency	Frequency division output range	Any frequency division ratio
		Division output form	Phase A, Phase B: Differential output Phase Z: differential output or open collector output
		Internal position command	Encoder position or command pulse
	Divider output source	Switch the maximum 16-segment position command of internal planning through DI	
Speed control	DI input function	Multi-stage speed running direction switching, internal multi-stage speed selection (1-4), speed command direction setting, internal speed limit source	
	DO output function	Zero speed clamp, motor rotation, zero speed signal, consistent speed, speed limited, speed reached	
	Analog input	Command voltage	±10V
		Command filter	Average filtering, first-order low-pass filtering
	Internal speed command	Switch up to 16 speed commands internally planned by DI	
Torque control	DI input function	Forward torque limit, reverse torque limit, torque command direction setting, speed limit selection	
	DO output function	Torque limit, torque reach	
	Analog input	Command voltage ±10V	
Conditions	Degree of protection	IP20	
	Environmental Pollution Level	PD2	
	Altitude	Lower than 1000m, use with derating above 1000m	
	Ambient temperature	0~55°C (when the ambient temperature is above 45°C, derate by 10% for every 5°C increase)	
	Storage temperature	-20~70°C	
	Use/Storage Environment Humidity	Below 90%RH (no condensation)	
	Vibration Resistance	4.9m/s ²	
Impact strength	19.6m/s ²

RS3P/C Basic Specifications

Item		Specificaiton	
Basic Specifications	Control method	IGBT PWM control, Sine wave current drive method	
	Encoder type	Communication encoder (RS485)	
	Communication	USB	Type-C, used for PC host computer communication
		RS485	Modbus, used for host controller control communication
		CAN	CAN , used for host controller control communication
	dynamic braking	Main circuit power off, servo alarm, servo off, action when overtravel	
	Protective function	Overvoltage, undervoltage, phase loss, overcurrent, overload, overspeed, encoder disconnection, etc.	
	Accessibility	Gain adjustment, notch filter, alarm record query, JOG operation, motor initial angle identification, etc.	
Number of control signals	DI *5 , HDI *2 , DO *5 (pluse) DI *4 , HDI *2 , DO *4 (CANopen)		
Position control	DI input function	Zero fixed enable, position command prohibited, forward overtravel switch, reverse overtravel switch, electronic gear ratio selection, position command direction setting, multi-stage position command enable, interrupt fixed-length state release, origin switch, origin reset Enable, disable fixed-length interruption, clear position deviation, and disable pulse command	
	DO output function	The positioning is completed, the positioning is close, the interruption and fixed length are completed, and the origin return is completed	
	Pulse input	Input pulse shape	Differential input, open collector
		Input pulse mode	Direction + pulse, CW+CCW, two pulses with 90 degree phase difference
		Max. pulse frequency	Differential input: high-speed maximum 4Mpps, pulse width not less than 0.125us
			Open collector: maximum 200kpps, pulse width not less than 2.5us
	Command filter	Average filtering, first-order low-pass filtering	
	Frequency division output Frequency	Frequency division output range	Any frequency division ratio
		Division output form	Phase A, Phase B: Differential output
			Phase Z: differential output or open collector output
Frequency division output source	Encoder position or command pulse		
Internal position command	Switch the maximum 16-segment position command of internal planning through DI		
Speed control	DI input function	Multi-stage speed running direction switching, internal multi-stage speed selection (1-4), speed command direction setting, internal speed limit source	
	DO output function	Zero speed clamp, motor rotation, zero speed signal, consistent speed, speed limited, speed reached	
	Internal speed command	Switch up to 16 speed commands internally planned by DI	
Torque control	DI input function	Forward torque limit, reverse torque limit, torque command direction setting, speed limit selection	
	DO output function	Torque limit, torque reach	
Conditions	Degree of protection Environmental	IP20	
	Pollution Level Altitude	PD2	
	Ambient temperature	Lower than 1000m , use with derating above 1000m	
	Storage temperature	~55°C (when the ambient temperature is above 45°C, derate by 10% for every 5°C increase)	
	Use/Storage Environment Humidity	-20~70°C	
	Vibration Resistance	Below 90%RH (no condensation)	
	Impact strength	4.9m/s ² 19.6m/s ²

1 Phase 220V Series Drive Electrical Specifications

Item		Size A		Size B	
Model		1R6L	2R8L	5R5L	6R6L
Power [kW]		0.2	0.4	0.75	1
Power capacity [kVA]		0.5	1	1.7	2
Rated current [Arms]		1.6	2.8	5.5	6.6
Maximum output current [Arms]		5.9	9.3	16.9	17
Main circuit	Input current [Arms]	2.4	5	8.7	11
	Main circuit power supply	单相 200~240Vac, -15%~+10%, 50/60Hz			
Control circuit	Control loop power supply	单相 200~240Vac, -15%~+10%, 50/60Hz			
Power loss	Main circuit power loss [W]	30.5	41	60.8	66.2
	Control circuit power loss [W]				
Braking resistor	Braking resistor	Optional			
	Resistance [Ω]	50	50	50	50
	Capacity [W]	30	30	50	50
	External min.resistance [Ω]	50	45	40	40
Cooling method		Natural cooling		Air cooling	
Overvoltage level		OVC III			

RS2P/C/A Basic Specifications

Item		Specifications	
Basic Specifications	Control method	IGBT PWM control, Sine wave current drive method	
	Encoder type	Communication encoder (RS485)	
	Communication	RS232	used for PC host computer communication
		RS485	used for host controller control communication
		CAN	CAN , used for host controller control communication
	Protective function	Overvoltage, undervoltage, phase loss, overcurrent, overload, overspeed, encoder disconnection, etc.	
	Accessibility	Gain adjustment, notch filter, alarm record query, JOG operation, motor initial angle identification, etc.	
Number of control signals	DI *7, DO*5		
Position control	DI input function	Zero position fixed enable, position command prohibited, positive overtravel switch, reverse overtravel switch, electronic gear ratio selection, position command direction setting, multi-stage position command enable, interrupt fixed-length state release, origin switch, clear position Deviation, pulse command prohibited	
	DO output function	Positioning is completed, Positioning is close, Interruption and fixed length are completed, and Origin return is completed	
	Pulse input	Max. pulse freq.	4MHz
		Input pulse shape	Differential input, open collector
		Input pulse mode	Direction + pulse, CW+CCW, two pulses with 90 degree phase difference
		Command filter	Average filtering, first-order low-pass filtering
	Frequency division output	Freq. division output range	Any frequency division ratio
		Division output form	Phase A, Phase B: Differential output Phase Z: differential output or open collector output
Divider output source		Encoder position or command pulse	
Internal position command	Switch the maximum 16-segment position command of internal planning through DI		
Speed control	DI input function	Multi-stage speed running direction switching, internal multi-stage speed selection (1-4), speed command direction setting, internal speed limit source	
	DO output function	Motor rotates, zero speed signal, speed is consistent, speed is limited, and speed is reached	
	Analog input	Command voltage	$\pm 10V$
		Command filter	Average filtering, first-order low-pass filtering
Internal speed command	Switch up to 16 speed commands internally planned by DI		
Torque control	DI input function	Positive external torque limit, negative external torque limit, torque command direction setting	
	DO output function	Torque limit, torque reach	
	Analog input	Command voltage	$\pm 10V$
Conditions	Degree of protection	IP20	
	Environmental Pollution Level	PD2	
	Altitude	Lower than 1000m, use with derating above 1000m	
	Ambient temperature	0~55°C (when the ambient temperature is above 45°C, derate by 10% for every 5°C increase)	
	Storage temperature	-20~85°C	
	Use/Storage Environment Humidity	Below 90%RH (no condensation)	
	Impact strength	19.6m/s ²	

RS2E Basic Specifications

Item		Specifications	
Basic Specifications	Control method	IGBT PWM control, sine wave current drive method	
	Encoder type	Communication encoder (RS485)	
	Communication	RS232	Used to connect PC background debugging software
		EtherCAT	IEC 61158 Type12, IEC 61800-7 CiA 402
	Protective function	Overvoltage, undervoltage, phase loss, overcurrent, overload, overspeed, encoder disconnection, etc.	
	Accessibility	Gain adjustment, notch filter, alarm record query, JOG operation, motor initial angle identification, etc.	
	Number of control signals	DI *6, DO*4	
Position control	DI input function	Forward limit switch, reverse limit switch, origin switch	
	DO output function	positioning complete	
	Position command	Given based on EtherCAT communication	
Speed control	DI input function	-	
	DO output function	Motor rotates, zero speed signal, speed is consistent, speed is limited, and speed is reached	
	Speed command	Given based on EtherCAT communication	
Torque control	DI input function	-	
	DO output function	Torque limit, torque reach	
	speed command	Given based on EtherCAT communication	
Conditions of Use	Degree of protection	IP20	
	Environmental Pollution Level	PD2	
	Altitude	Lower than 1000m, use with derating above 1000m	
	Ambient temperature	0~55°C (when the ambient temperature is above 45°C, derate by 10% for every 5°C increase)	
	Storage temperature	-20~70°C	
	Use/Storage Environment Humidity	90%RH 以下 (no condensation)	
	Vibration Resistance	4.9m/s ²	
Impact strength	19.6m/s ²		
EtherCAT Communication Specifications	Communication standard	IEC 61158 Type12, IEC 61800-7 CiA Drive Profile	
	physical layer	100BASE-TX (IEEE802.3)	
	Connector	RJ45*2 (with shield)	
		IN(EtherCAT input), OUT(EtherCAT output)	
	Communication cable	Recommended network cable: twisted-pair double-layer shielded network cable, Ethernet Category 5 (100BASE-TX) or higher	
	Baud rate	100Mbps	
	Communication length	Maximum distance between nodes is 100 meters	
	Process data	Fixed PDO, Variable PDO	
	Mailbox (COE)	SDO request, SDO reply	
	Synchronous mode	DC Sync (Sync0 Event)	
	Communication cycle	250us~10000us	
Supported CiA 402 modes PP	PP, PV, PT, HM, CSP, CSV, CST		

RS2 series appearance and installation dimensions

■ Size A

Size A - 1R6L/2R8L			
W(mm)	50	W1(mm)	38
H(mm)	185	H1(mm)	174
D(mm)	175	screw	3-M4

■ Size B

Size B - 5R5L/6R6L			
W(mm)	60	W1(mm)	48
H(mm)	185	H1(mm)	174
D(mm)	175	screw	3-M4

RS2 series wiring diagram

■ 1 PHASE 220V Size A/B

Circuit breaker , is used to protect the power line and cut off the circuit in case of overcurrent

Noise filter, to prevent external noise from the power line

Electromagnet c contactor, Turn on/off the servo power supply, please install a surge suppressor when using

Braking resistor When the braking capacity of the internal braking resistor is insufficient, use an external braking resistor.

Note: Before selecting an external braking resistor, be sure to unplug the short connector or wire between the main circuit terminals P and B1

MA3 Series Servo Motor

New Electromagnetic Design

Manufacturing process upgrade

Miniaturization / high protection / more energy saving

Speed up

4 times peak torque
7000rpm peak speed
23-bit high-precision optical encoder
30% lower temperature rise

Security

Integrated case design
IP67 protection level

Compact

20% shorter product length

MA3 Series model design

MA3 S - M 04 010 F - A0 Q 2 L

MC2 Series servo motor

7.5kW

Maximum power

5 Poles

Smooth start, higher power density

6000rpm

High speed and stable operation

23 -bit

High precision absolute value optical encoder,
more precise

MC2 series model design

MC2 S - M 06 020 F - A0 B2
